

Time and Attendance Management App (TAM)

All about NoQu's new age Time and Attendance Management App (TAM).

NoQu - TAM streamlines workforce tracking and management, resulting in precise attendance data capture for a seamless & error-free payroll process thanks to customizable check-in & check-out options such as button, face recognition, and QR codes.

Boasting with features like AI, Live Location Tracker and Geo Fencing, NoQu - TAM goes beyond simple attendance management as it gives businesses a comprehensive and efficient human capital management system.

Artificial Intelligence

NoQu - TAM software leverages advanced technologies to provide a seamless and efficient workforce attendance management solution thanks to the AI-driven face recognition system that gives a fool proof attendance marking process. It predicts your workforce attendance pattern as well as analyzes user behavior.

Zero capital investment.

NoQu TAM offers:

AI-enabled features

Customizable employee check-in & out

Live Location Tracking

NoQu - TAM offers round the clock real-time workforce monitoring solution, that includes a live location tracker, providing you with a comprehensive view of your team's current position and movements. This feature ensures enhanced efficiency and accountability by enabling you to closely track and manage employee activities.

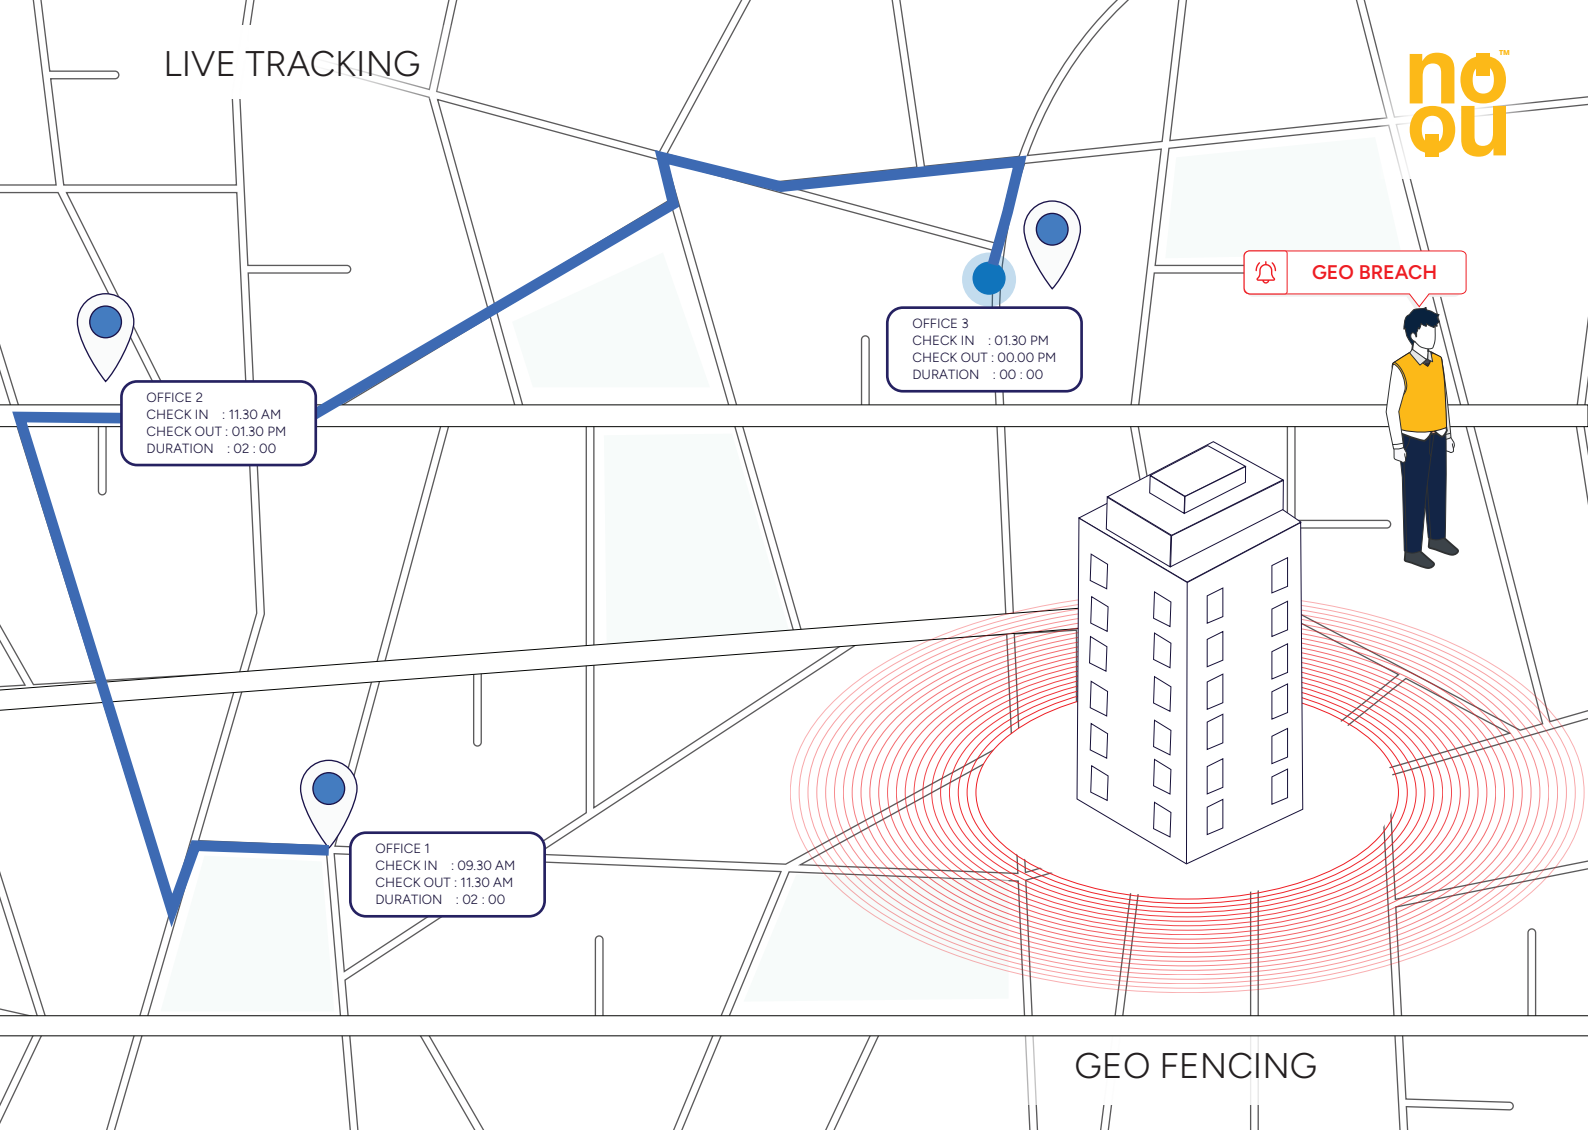

Geo Fencing

Geo fencing feature sets a new standard for real-time attendance management. By establishing geographical restrictions and customized boundaries, you can get a guaranteed accurate clock-in & outs of the employee. Encompass the boundaries and get alerts if there is any geofence breach by employee.

Workflow Integration and Regularization

NoQu - TAM streamlines various organizational processes, such as managing permissions (leave, late check-in, early check-out), overtime, live-tracking on/off, requests and approvals, configuring breaks, shifts, overtime, leave, holidays, hierarchy, roles, multiple location attendance, and multiple time check-ins and check-outs. It also supports random verifications in accordance with the organization's rules and policies.
